                                                                                                                                                                                                                                                                                                                                                                                                                   Dibaeis baeomyces.

Dibaeis baecomyces

Bukaryota; Fungil. Ascomycota; Pezizomycotina; Lecanoromycetes;

Lecanoromycetes incertae sedis; Icmadophilaceae; Dibaeis.

1 (bases 1 to 990)

Platt,J.L., Camacho,F.J. and Spatafora,J.W.

Prolution of the lichen symbiosis within the Leotiales; molecular phylogenetic hypotheses for Dibaeis and Baeomyces
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Platt.J.L. and Spatafora,J.W.

The probes are manufactured complementary to the H.c. 189 rRNA or rDNA gene. This region also corresponds to the bases 172-193 of Saccharomyces cerevisiae 185 rRNA. The probe is specific for H.c. and can be used to distinguish the fungus from all others, even its nearest phylogenetic neighbour Blastomyces dermatitidis. Wocleic acid hybridisation of the specific probe is enhanced by the use of helper probes (AAQ73434-5). This method allows the detection and/or the quantitation of H.c. from samples e.g. body
                                                                                  A probe (AAQ73433) or its complement (AAQ73436) and corresponding RNA sequences (AAQ73437 and AAQ86436) used for the specific detection of all strains of Histoplasma capsulatum (H.c.). The probes are manufactured complementary to the H.c. 185 rRNA or rDNA gene. This region also corresponds to the bases 172-193 of Saccharomyces cerevisiae 185 rRNA. The probes are manufactured complementary to the H.c. 108 rRNA or rDNA gene. This region also corresponds to the bases 172-193 of Saccharomyces cerevisiae 18S rRNA. The probe is specific for H.c. and can be used to distinguish the fungus from all others, even its nearest phylogenetic neighbour Blastomyces dermatitidis. Nucleic acid hybridisation of the specific probe is managed by the use of helper probes (AAQ73434-5). This method allows the detection and/or the quantitation of H.c. from samples e.g. body fluids, tissue samples, soil and water.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Probe; detection; Histoplasma capsulatum; 18S; rRNA; rDNA; hybridisation; Saccharomyces cerevisiae; fungus; phylogenetic; helper probe; soil; water; Blastomyces dermatitidis; quantitation; sample; body fluid; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A probe (AAQ73433) or its complement (AAQ73436) and corresponding RNA sequences (AAQ73437 and AAQ86436) used for the specific detection of all strains of Histoplasma capsulatum (H.c.). The probes are manufactured complementary to the H.c. 18 ETRN or IDNA gene. This region also corresponds to the bases 172-193 of Saccharomyces cerevisiae 185 FRNA. The probe is specific for H.c. and can be used to distinguish the fungus from all others, even its nearest phylogenetic neighbour Blastomyces enhanced by the use of helper probes (AAQ73434-5). This method allows the detection and/or the quantitation of H.c. from samples e.g. body fluids, tissue samples, soil and water.

The present invention describes a method for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. The method uses fluorescence-labeled nucleic acids isolated from the Fr cells and a substrate of expressed sequence tags (EST). The ESTS care used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of genes in a first filamentous fungal cells. Monitoring the global expression of genes from FF cells allows the production of potential of the microorganisms to be improved. New genes may be discovered, possible functions of unknown open reading frames can be discovered, possible functions of unknown open reading frames can be conditioned. The expression of genes can be used to study how FF cells adapt to changes in culture conditions, environmental stress, spore adapt to changes in culture conditions, environmental stress, spore confineering. Using ESTS provides several advantages over genomic or random cDNA clones including elimination of redundancy as one spot on an exray equals one gene or open reading frame, and organisation of the microarrays based on function of the gene products to facilitate confineering values one gene or open reading frame, and organisation of the microarrays based on function of the gene products to facilitate confineering values one spot on an exaray equals one gene or open reading frame, and organisation of the microarrays based on function of the gene products to facilitate confineering values one spot on an exaray equals one gene or open reading frame, and organisation of the microarrays based on function of the gene products to facilitate confineering values or spot on an exaray equals one gene or open to spot on an exaray equals one gene or open exaray exar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                        g
                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                       This invention describes a novel method for detecting Aspergillus nucleic acid (I) in a body sample which comprises the isolation of (I) followed by a two-step polymerase chain reaction (PCR) amplification of any nucleic acid having a sequence essentially homologous to part of the 3'-end of the Aspergillus 185 rRNA gene using primers used in the first step that do not overlap with those in the second step. The method is used for early disgnosis, and monitoring, of aspergillosis, particularly invasive infections in hematological-oncological patients with long-term suppression of the immune system. Unlike the known method using overlapping primers, this process provides efficient and reliable detection of Aspergillus in clinical situations. It is specific for Aspergillus (it detects the species terreus, niger, versicolor, clavatus, flavus, and fumigatus, but not oryzae, nor bacteria or fungi from any
                                                                                                                                                                                                                                                                                                                                                                            other genera). This sequence represents the DNA sequence of Aspergillus funigatus 18S RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

```
The invention relates to evaluating strain variation within and between different populations of the tuberculosis bacterial pathogen, why cobacterium therculosis or related Mycobacterium by determining the nuclectide sequence of the first strain at positions in the complete sequence of the genome that correspond to positions that differ in the nuclectide sequences of M. tuberculosis strains CCC 1551 (AAI99683) and H37Rv (AAI99682). The method is useful for evaluating strain variation of M. tuberculosis and has valuable application in the fields of
                                                                                                                                                                                                                   The present invention relates to a new microbe of Acinetobacter or .

Burkholderis genus producing aldonic acid and oxidising specifically the hemiacetal hydroxy group of a saccharide having said hydroxy group.

Aldonic acid is used as a mineral relationcing agent. The present sequence was used to illustrate the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          determining the nucleotide sequence of the strain at positions in the genome corresponding to positions where M. tuberculosis strains CDC 1551 and H37Rv differ

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to evaluating strain variation within and between different populations of the tuberculosis bacterial pathogen, Mycobacterium therculosis or related Mycobacterium by determining the nucleotide sequence of the first strain at positions in the complete sequence of the genome that correspond to positions that differ in the nucleotide sequences of M. tuberculosis strains CDC 1551 (AA199683) and H37Rv (AA199682). The method is useful for evaluating strain variation of M. tuberculosis and has valuable application in the fields of tuberculosis genetics, epidemiology, patient treatment and epidemic

The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The carbon distribution expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess blodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. Abs64197-Ab54564 represent novel human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Proces The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human genome-derived single exon nucleic acid probes useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   73.0%; Score 16.8; DB 22; Length 454; llarity 90.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          å
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contracting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for encode proteins. They are useful for assessing the toxicity of chemical expression analysis useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence transmission. The method is suitable for rapid production of functional information from genomic sequence. The resent sequence data for this patent did not form part of the invention. Note: The sequence data for this patent did not form part of the form unity of the sequence data for this patent did not form part of the form unity of the sequence data for this patent did not form part of the form unity of the sequence data for this patent did not form part of the form unity of the diversity of the sequence data for this patent did not form part of the form part of the form part of the form when the difference is a single batter did not form part of the form of the form part of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New spatially-addressable set of single exon nucleic acid probes, useful for measuring gene expression in sample derived from human breast, comprises number of single exon nucleic acid probes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

```
The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is one of the probes of the
                                                                                                                                                                                                                                                     Single exon nucleic acid probes for analyzing gene expression in human brains -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  exon; gene expression analysis; probe;

The present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system c.g. cardiovascular disease, hypertension, cardiac arrhythmias and Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the valor are sequenced.

The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphoma, leukaemia and myeloma. The present sequence is one of the probes of the invention.
                                              Example 4; SEQ ID NO: 3276; 658pp + Sequence Listing; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 13,

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Description

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
